

TECHNICAL ASSESSMENT

Congratulations on moving forward in the hiring process! This take-home assignment is designed to evaluate your ability to build a practical feature similar to what we offer in our platform. Please read the instructions below carefully.

Objective

Build a simplified Community App that allows users to register, create groups, and post content within those groups. Unauthenticated users should be able to view all posts, but only authenticated users can post or create groups.

Features to Implement

1. User Authentication

- Allow users to register and log in securely.
- Use token-based authentication.
- Store user details such as name, email, and password.

2. Groups

- Authenticated users can create groups (e.g., name and description).
- Each group should be tied to the user who created it.

3. Posts

- Authenticated users can create posts inside groups they created.
- Each post must be linked to a group and the user who posted it.

4. Public Feed

- Unauthenticated users should be able to view a feed of all posts across all groups.
- Only logged-in users can create groups or post content.

Tech Stack Requirements

- Backend: Django + Django Rest Framework
- Database: MySQL
- Frontend: React + Tailwind CSS

Timeline

- Submit the completed project by 11:59 PM (WAT) on Sunday, June 22, 2025.

Submission Guidelines

Please submit the following:

- A link to a public GitHub repository containing your code.
- A README.md file with:
 - Setup instructions (for both frontend and backend)
 - Technologies used
 - Any known limitations or assumptions made
- (Optional) A deployed version of the app on platforms like Render, Vercel, Netlify, or Railway.

We look forward to reviewing your work!

Best regards,
Jend-Z
